Python PDF Test Document

AUTOMATED PARSING & EXTRACTION TARGET

REF-ID: PY-PDF-2026X

1. OVERVIEW & TEXT EXTRACTION TEST

This reference document provides standardized structural patterns for validating Python PDF processing libraries, including `pypdf`, `pdfplumber`, `PyMuPDF` (fitz), and `pdfminer.six`. It contains structured text, key-value configurations, multi-column tables, and Unicode symbols to evaluate text layout and coordinate positioning algorithms.

2. STRUCTURED CONFIGURATION DATA

Test Suite Version: `v4.2.1-stable`

Encoding Format: `UTF-8 / Standard`

Target Engine: `Python 3.10+`

Checksum Verification: `0x8F9B2C4D`

Page Coordinates: `A4 Portrait (210x297mm)`

Primary Status: `ACTIVE_VERIFIED`

3. TABULAR DATA EXTRACTION BENCHMARK

The table below presents structured numeric data intended for table parsing validation using `pdfplumber.extract_tables()` or `tabula-py`.

RECORD ID	COMPONENT MODULE	METRIC STATE	EXECUTION (MS)	COST INDEX
REC-001	Text Layout Engine	PASSED	12.45	$140.00
REC-002	Font Matrix Decoder	PASSED	8.10	$85.50
REC-003	Vector Stream Rasterizer	WARNING	45.22	$310.25
REC-004	Table Boundary BBox	PASSED	19.88	$215.00
REC-005	Metadata Stream Reader	PASSED	4.30	$45.00

4. CHARACTER ENCODING & MATH VERIFICATION

Unicode & Mathematical Symbols:

- **Currency Symbols:** $ (USD), € (EUR), £ (GBP), ¥ (JPY), ₹ (INR)
- **Mathematical Expressions:** $\sigma^2 = \sum (x_i - \mu)^2 / N$
- **Logical & Greek Letters:** α, β, γ, Δ, λ, π, ∞, ≤, ≥, ≠, ±, √x
- **Formatting Edge-Cases:** Single 'quotes', "double quotes", em-dashes (—), and trailing spaces.

5. PYTHON VERIFICATION CODE SNIPPET

To verify this document in Python, execute the following test script:

```
import pypdf; reader = pypdf.PdfReader("sample_python_test_document.pdf");
print(reader.pages[0].extract_text())
```
